

CSB - SLOT DRAIN  
**PROFILE I**

# NEW PRODUCT

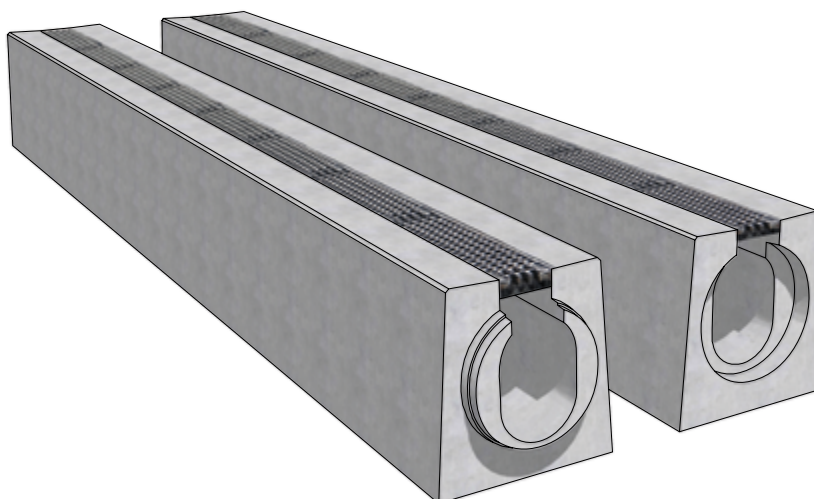

*Slot drain with continuous cast iron grate*

CSB - SLOT DRAIN

## PROFILE I

*Slot drain with continuous cast iron grate*

## IDEAL SOLUTION FOR AREAS WITH INCREASED RISK OF WATER AND SILT ACCUMULATION

- Large industrial structures often struggle with water collecting in critical locations and a risk of flooding as a result of a drainage opening being blocked by floating debris or not having sufficient flow capacity.
- To enable large-capacity drainage from such critical areas, we introduced a new type of Profile I with increased grate flow capacity called Slot drain with continuous cast iron grate.
- The flow rate of the grate on this new type of slot drain is several times higher than that of a standard drain slot.
- Special hinged design of the grate allows for easy access and cleaning of the gutter by simply lifting the grate open off the hinge in any section of the slot drain. This eliminates the need to use cleaning pieces.
- For drained surfaces with larger gradients toward the gutters, the drainage slots are not overflown/skipped by the water.

Name	Order code	Nominal dimensions* mm			Quantity	Weight
		Basic height	Length	Width	pcs/m	pcs
Slot drain with continuous drainage grating	I - 0M	500	4000	400	0,25	1428
Slot drain with continuous drainage grating with 0.5% bottom gradient	I - 0M -G	500	4000	400	0,25	1438
